Personal Profile

Software engineer with First-Class BSc in Computer Science and hands-on experience building production systems at Amazon. Skilled in Python, SQL, and AWS, with a track record of designing automated pipelines and tooling that improved team throughput by 3x. Strong foundation in backend development, cloud infrastructure, and systematic problem-solving. Eager to build scalable services and infrastructure that power AI products at scale.

Experience

AI EXPERT – ML DATA SERVICES

SEP 2025 - PRESENT

AMAZON AGI | CAMBRIDGE

- Built Python tooling for automated data processing and LLM evaluation workflows, including format conversion pipelines and quality validation scripts, increasing team throughput by 3x.
- Processed thousands of LLM outputs through automated quality validation pipelines, ensuring consistent evaluation standards across projects.
- Developed systematic prompt engineering frameworks and conducted A/B testing to measure and optimise model behaviour across diverse domains.
- Investigated model failures, edge cases, and emergent behaviours; synthesised technical findings into actionable recommendations for model improvements.
- Collaborated cross-functionally with ML researchers and software engineers to improve dataset quality and expand evaluation coverage.
- Designed data processing pipelines handling structured and unstructured data formats (JSON, JSONL, CSV) for large-scale model evaluation tasks.
- Created internal documentation and tooling that enabled team members to run evaluation workflows independently, reducing onboarding time.

COMPUTER SCIENCE TEACHER

SEP 2021 – SEP 2024

WHITGIFT SCHOOL, GREY COURT SCHOOL | LONDON

- Taught object-oriented programming in Python, algorithms, and data structures to 100+ students, developing ability to communicate complex technical concepts clearly.
- Integrated LLM-powered educational tools into curriculum, building custom applications and evaluating generative AI output quality.
- Performed data analysis using Python and Power BI on assessment datasets to identify patterns and improve learning outcomes.

IT OPERATIONS ENGINEER

JUN 2019 – SEP 2020

EGRESS SOFTWARE TECHNOLOGIES | LONDON

- Wrote automation scripts in Python and Bash to streamline operational workflows, reducing manual tasks by 40%.
- Built SQL-based reporting and analytics systems supporting internal tooling and operational intelligence.
- Managed Linux systems and Azure cloud infrastructure, including provisioning VMs for analytics workloads.
- Led enterprise network security infrastructure redesign, presenting technical proposal to C-Suite and managing end-to-end implementation.
- Orchestrated company-wide remote work transition during COVID-19, ensuring secure system access for 100+ employees with zero downtime.

Education

PGCE COMPUTER SCIENCE

2021-2022

KINGS COLLEGE LONDON | LONDON, WATERLOO

- Awarded PGCE with QTS certification
- Awarded British Computing Society Scholarship

BSc COMPUTER SCIENCE

2017-2021

UNIVERSITY OF KENT | KENT, CANTERBURY

- First-Class Honours

A-LEVELS

2014-2016

TIFFIN SCHOOL | KINGSTON-UPON-THAMES

- Mathematics, Biology, Chemistry

GCSE

2014

TIFFIN SCHOOL | KINGSTON-UPON-THAMES

- 11 GCSES's: including English Language (A*) and Mathematics (A*)

Skills

Software Engineering

Python, SQL, Java, object-oriented design, testing and debugging, code review

Infrastructure & Cloud

AWS, Azure, Linux, Git, CI/CD pipelines

AI/ML Systems

LLM evaluation, prompt engineering, model analysis, data pipelines, NLP

Tools

Docker, pytest, Power BI, Jupyter
